1) Find the coordinates of the point **R** on the line segment joining the points P(-1,3) and Q(2,5) such that  $PR = \frac{3}{5}PQ$ .

Solution: Given,

Variable	Description	formula
point P	$\begin{pmatrix} -1 \\ 3 \end{pmatrix}$	-
point Q	$\begin{pmatrix} 2 \\ 5 \end{pmatrix}$	-
Ratio of $\frac{PR}{PQ}$	<u>3</u> 5	-
point R	Point on line PQ	$\frac{\mathbf{P}+n\mathbf{Q}}{1+n}$

**R** lies on the line joining the points **P** and **Q** so,

$$PR + RQ = PQ \tag{1}$$

$$\frac{PR}{PR + PO} = \frac{3}{5} \tag{2}$$

$$5PR = 3PR + 3RQ \tag{3}$$

$$\frac{PR}{PQ} = \frac{3}{2} \tag{4}$$

$$n = \frac{3}{2} \tag{5}$$

(6)

By section formula,

$$\mathbf{R} = \frac{n\mathbf{Q} + \mathbf{P}}{1 + n} \tag{7}$$

$$\mathbf{R} = \frac{n\mathbf{Q} + \mathbf{P}}{1+n}$$

$$\mathbf{R} = \frac{1}{1+\frac{3}{2}} \left( \binom{2}{5} + \frac{3}{2} \binom{-1}{3} \right)$$
(8)

$$\mathbf{R} = \begin{pmatrix} \frac{4}{5} \\ \frac{21}{5} \end{pmatrix} \tag{9}$$

(10)

Therefore the coordinates of point **R** is  $\left(\frac{4}{5}, \frac{21}{5}\right)$
