1) In what ratio does the point P(-4, y) divide the line segment joining the points A(-6, 10) and B(3, -8)? Hence, find the value of y.

Solution: Given,

Variable	Description	formula
n	Ratio in which point \mathbf{P} divides AB	-
P	Point on AB	$P = \frac{A + nB}{1 + n}$
A	$\begin{pmatrix} -6\\10 \end{pmatrix}$	-
В	$\begin{pmatrix} 3 \\ -8 \end{pmatrix}$	-

By section formula,

$$\mathbf{P} = \left(\frac{\mathbf{A} + n\mathbf{B}}{1 + n}\right) \tag{1}$$

$$\binom{-4}{y} = \frac{\binom{-6}{10} + n\binom{3}{-8}}{1+n}$$
 (2)

(4)

on comparing,

$$n = \frac{2}{7} \tag{5}$$

$$y = \frac{10 - 8\left(\frac{2}{7}\right)}{1 + \frac{2}{7}}\tag{6}$$

$$y = 6 \tag{7}$$

point \mathbf{P} divides the line segment AB in the ratio 2:7.
